Package 'SMEP24'

September 3, 2024

Type Package

Title SMEP 2024 Project

Version 0.1.0

Author Nathan DePuy and Jonathan Templin

Maintainer Nathan DePuy <depy@uiowa.edu>

Description Contains files for the 2024 SMEP project

License MIT + file LICENSE

Encoding UTF-8

LazyData true

Suggests testthat (>= 3.0.0)

Depends bayesplot,
cmdstanr,
ggplot2

Config/testthat/edition 3

RoxygenNote 7.3.2

Contents

`bifactor` *Generate a Bifactor Simulation Environment*

Description

Generate a Bifactor Simulation Environment

Usage

```
bifactor(...)
```

Arguments

...	objects inherited from parent

Value

an environment stored to a list object of the bifactor simulation environment

---

countRhat *Rhat Convergence Indicator Function*

Description

Rhat Convergence Indicator Function

Usage

```
countRhat(modsum, rHatThreshold = 1.05)
```

Arguments

rHatThreshold	maximum tolerance for indicated convergence based on Rhat values
modum	'data.frame' object generated from '$summary()' method on a 'cmdstanr' model environment

Value

count of Rhat > threshold

---

getDims *Find Dimensions of Filtered* .GlobalEnv *Object*

Description

Find Dimensions of Filtered .GlobalEnv Object

Usage

```
getDims(name)
```

Arguments

name	name of target object

Value

integer of object's total dimensions

getStdSumScore *Calculate Standardized Sum Scores*

Description

Calculate Standardized Sum Scores

Usage

```
getStdSumScore(resps)
```

Arguments

resps	matrix of dichotomized (0/1) item response data

Value

a vector of standardized sum scores of the measured latent trait

makeNeg *Negative Lambda Indicator Function*

Description

Negative Lambda Indicator Function

Usage

```
makeNeg(lambda, numNeg = 2)
```

Arguments

lambda	inputted item discrimination/slope values
numNeg	integer indicating quantity of lambda values to negate

Value

a vector of all lambda values (including negated lambdas)

`twopl` *Generate a 2-Parameter Logistic (2PL) IRT Simulation Environment*

Description

Generate a 2-Parameter Logistic (2PL) IRT Simulation Environment

Usage

```
twopl(...)
```

Arguments

`...`	objects inherited from parent

Value

an environment stored to a list object of the bifactor simulation environment
